WATER HEATERS AND HOT WATER STORAGE TANKS

DRAŽICE

IT ALL BEGAN
WITH A SIMPLE IDEA

to produce the most cost-efficient and trouble-free water heater – the best storage heater. Every year, we think we are close enough to our goal. And yet, every year we produce more sophisticated water heaters, storage tanks and heating elements, ...

Maximum user comfort, energy efficiency and environmental responsibility are the main driving forces in our daily work.

Tolerance of all stated dimensions complies with ČSN ISO 2768-c.
Note: * The value is derived by calculation ** For models 200 and 250, a 6 bar safety valve is included.

MAIN ADVANTAGES

CRYSTAL ENAMEL®

DZD water heaters and hot water storage tanks are protected inside by a unique Crystal Enamel anti-corrosion coating developed in cooperation with the German company Wendel. This layer is hygienically clean and therefore suitable for permanent contact with drinking water. Unlike the stainless steel, Crystal Enamel is resistant to pitting corrosion in the environment of hard and chlorinated water.

THERMO GEN®

Thermogen4 is the fourth generation of our exclusive insulating foam, which has been developed in cooperation with the company of Covestro, for attaining the most optimal heat- loss coefficients. The key here is a unique mixture tailor-made for our heaters. Its qualities are in line with all current and future trends in the field of heaters. It excels both in its insulating qualities as well as its shape integrity.Moreover, we are one of the first manufacturers in Europe able to meet the strictest ecological requirements of the EU, and thereby significantly contribute to protecting the atmosphere and the environment.

CERAMIC SOLUTION®

The Ceramic Solution electrical heating unit is exceptionally resistant to hard and aggressive water and significantly extends the life of the water heater and storage tank under any conditions. This ensures the long-term stable performance of the heater system due to reduced limescale. DZD is a pioneer in this water heating solution; they have been using it in their products for over 50 years.

PRESSURE FLOW HEATERS

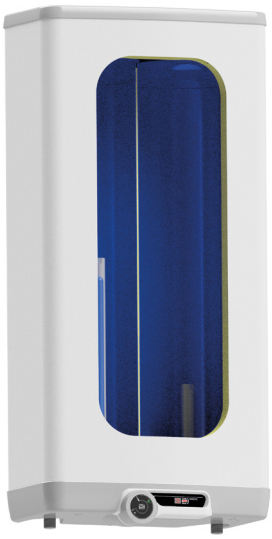

LOW-CAPACITY PRESSURE
AND LOW-PRESSURE STORAGE TANKS

OKHE ONE | ELECTRIC WATER HEATERS | WALL-MOUNTED VERTICAL

- New flat heater in models 20–120
- Suitable for installation in restricted areas, it can be built in the kitchen line; **Horizontal installation possible by models 30 and bigger**
- Quick water heating due to the concept of two vessels
- It combines the traditional DZD technology and modern design
- Possible alternatives to the replacement of the gas heater
- The option of purchasing 2 multipurpose holders (order number 102000703)
- New flexible wall hinge available (4 mounting buttons)
- New electronic thermostat

OKHE ONE 20

OKHE SMART | ELECTRIC WATER HEATERS | WALL-MOUNTED VERTICAL

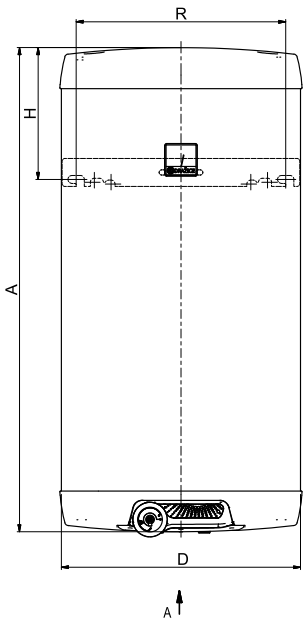

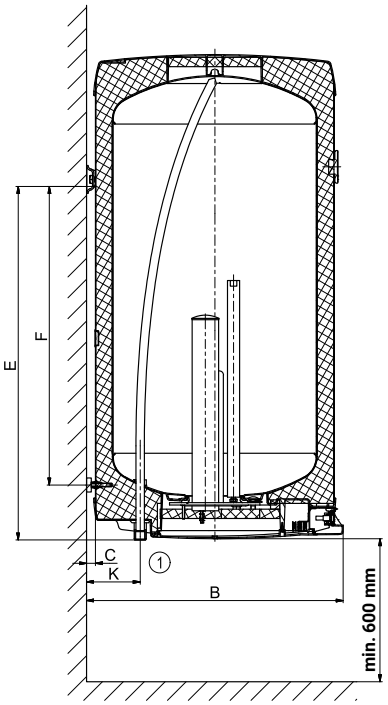

- Electric water heater combining the best available technologies
- Contains self-learning Smart Control Unit for optimisation of consumption, saving up to 15% on expense
- Can be controlled using DZD smartphone app (Android/iOS)
- Smart HDO function (low tariff): the heater recognizes the low tariff in electrical network.
- Independent diagnostics of malfunctions, e.g. status of protective anodes
- Can be used as a classic heater
- Can be plugged into any socket without temporal or other control

- Working pressure in the vessel and in the heat exchanger is 1 MPa
- With one large heat exchanger for connecting the heating source (heat pump, low-temperature source)
- Installation of TJ 6/4" electrical heating unit possible
- Installation of TPK 150-8/2,2 kW electrical heating unit for OKC 300–500 NTR/HP possible
- Removable insulation for models 750–1000

AQUA 250 HP

WATER HEATER WITH HEAT PUMP | **FLOOR-STANDING**

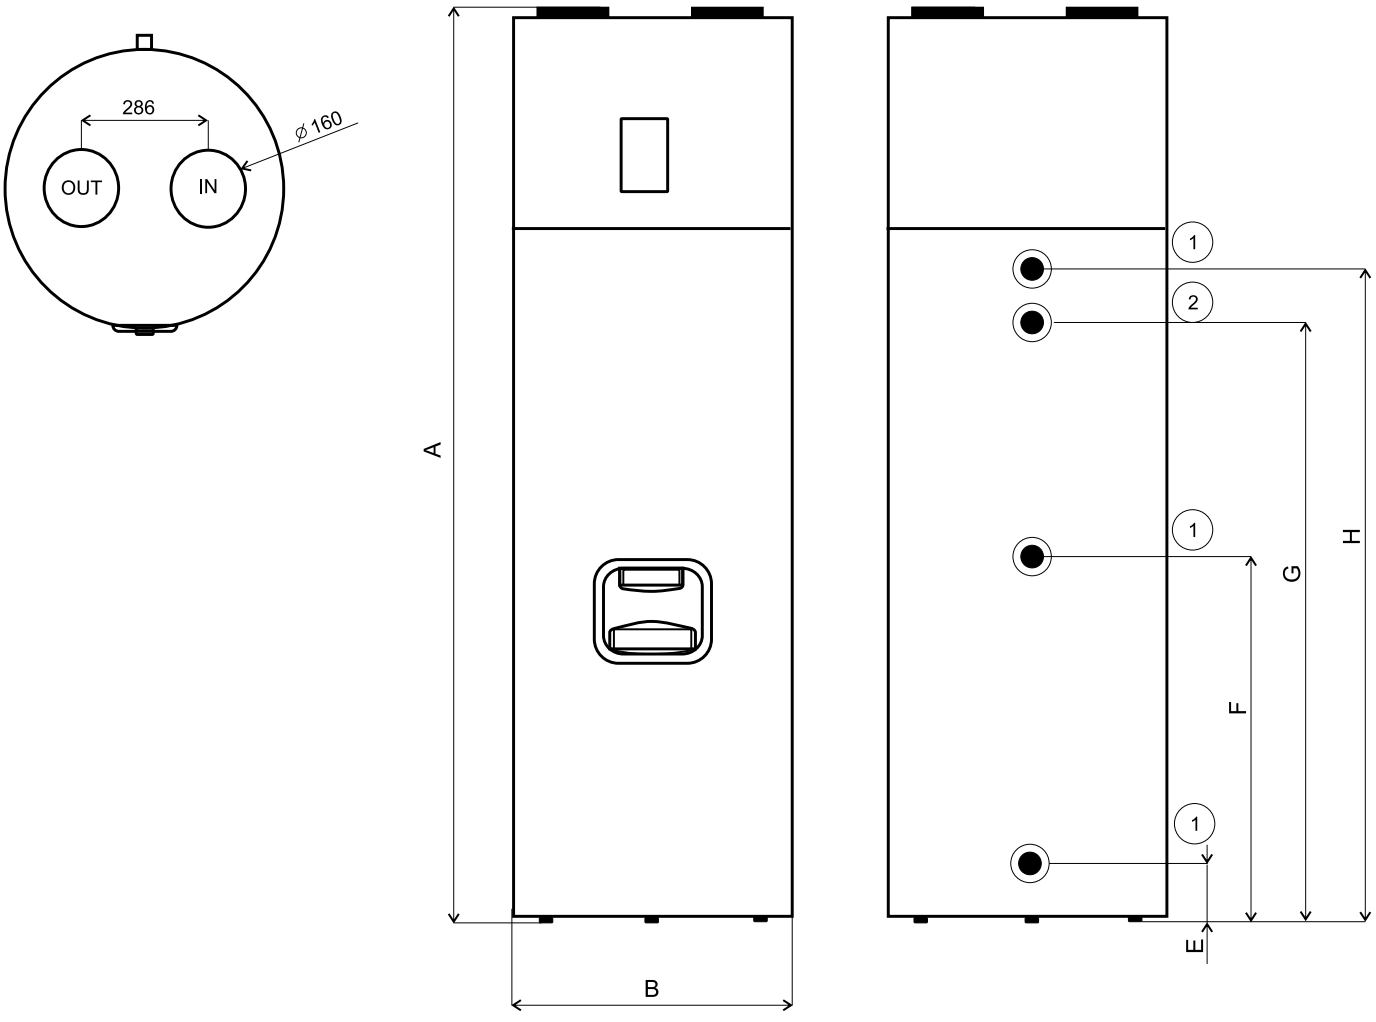

- Quiet operation, high performance, energy saving
- Water heater enamel container
- Works from –5 °C of ambient temperature
- Temperature 55 °C water also during winter
- Antilegionell function

ACCESSORIES

ENTS

EXPANSION VESSELS FOR HEATING SYSTEMS

- Suitable for use in heating systems
- It absorbs the volume of water that is created when the heating water temperature rises
- You will especially appreciate its effect at the beginning of the heating season when the heating water temperature can rise very quickly
- It also helps the heating system with the loss of heating water which would be caused by its discharge through the safety valve

ENTV

EXPANSION VESSELS FOR HOT WATER

- Suitable for use in the hot water circuits
- It absorbs the volume of water when heated and protects the system from pressure shocks
- It saves water that would otherwise drain through the safety valve into the sewer
- The materials used are intended for contact with drinking water

IPS ProtectX

IPS - IONIZATION POLARIZATION SYSTEM

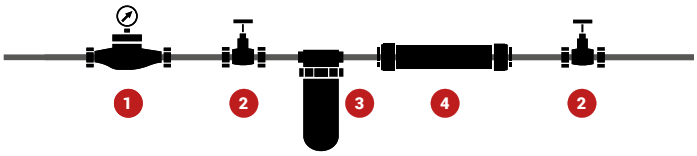

Equipment for the physical treatment of water in connection with the reduction of limestone for the protection of household appliances and water distribution systems

ADVANTAGES

- It prolongs the service life of heating equipment and sanitary equipment
- No external power supply
- Maintenance free
- Zero additional costs
- It does not use any chemicals
- Negligible pressure losses
- Patented product
- Certified effectiveness
- Blue line - suitable for all types of water supply, in addition it contains disinfectants, suitable e.g. for untreated water sources
- Red line - suitable for all types of water supply

INDICATIVE DIAGRAM OF THE IPS ProtectX EQUIPMENT LOCATION RED LINE

WATER FLOW SENSOR

FLOW SENSOR FOR CONSTANT WATER LEAK DETECTION

The water leak detector protects your home from flooding. It will help you react to the accident in a timely manner, giving you the chance to minimize damage to your property and the property of others. Excellent for use in a washing machine or boiler for example. In this case, the detector will alert you by triggering an alarm.

FUNCTION

- Detection of water flow in both directions
- Triggering an alarm for a constant flow rate longer than 24 hours.
- Acoustical and optical alarm signalling
- Light signalling of the active sensor
- Light signalling for a low battery

TECHNICAL INFORMATION

- 3 years of battery life (at approx. 48h of alarm state)
- Storage mode with almost zero consumption
- Sensor adapted for ENBRA ETK-EAX water meters with a maximum flow rate of 2.5m³/hour and a minimum of 0.008m³/hour
- Sensor supplied with DN15 water meter, 3/4" connection screwing
- ACCEPT button to reset alarm

REDUCTION FLANGES

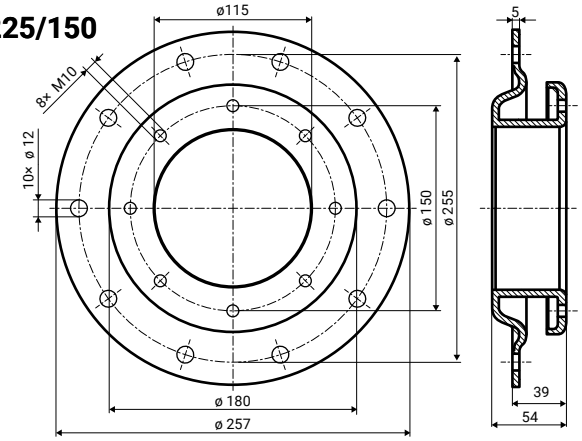

- REU, RDU and RSW electrical heating units can be assembled in the OKCE 160–500 S, OKC 300, 400, 500 BP water heaters using a 210/150 reduction flange.

- REU, RDU, RDW and RSW electrical heating units can be assembled in water heaters with capacities of 750 and 1000 litres using a 225/150 reduction flange.

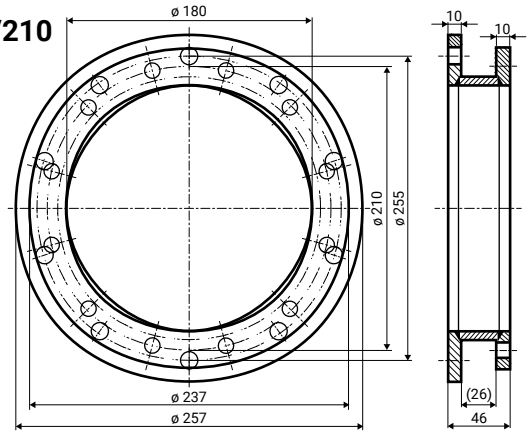

210/150

225/150

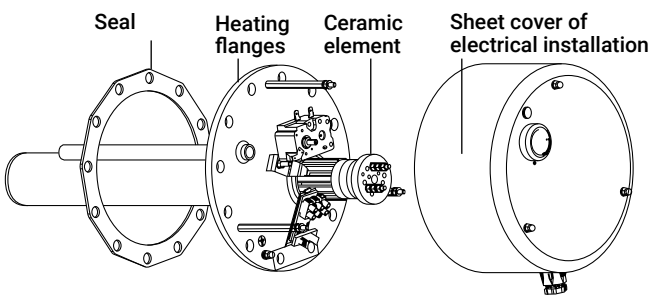

225/210

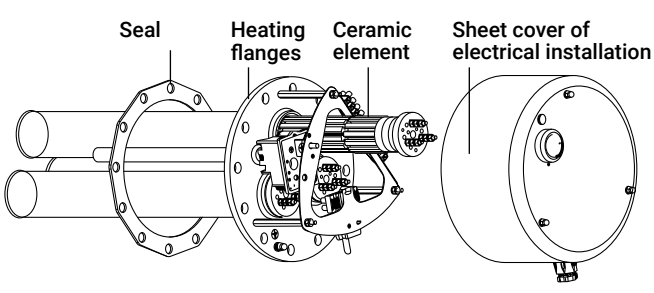

- ETPK 210 - 2.2 kW and TPK 210 - 12/3-6 kW, TPK 210 - 12/5-9 kWand TPK 210 - 12/8-12 kW electrical heating units can be assembled inwater heaterswith capacities of 750 and 1000 litres using a 225/210 reduction flange.

BOX OF THERMOREGULATION KR

■ Indirect-heating water heaters are equipped with sensor pockets to place the sensor from an external source (solid fuel boiler, solar controller, heat pump, etc.). The KR thermoregulation box can be used in installations which cannot be controlled by a control unit from an external source; the KR box controls the external source or its switching elements (e.g. a three-way valve). The switching temperature can be set at between 5–74 °C. The water heater tank is equipped with sensor pockets with an internal thread of M 12 × 1.5 for the installation of the controllers' sensors.

ACCESSORIES FOR PVE

DZD products ready for use of the power exceed from the PVE

- The cheapest solution for energy storage is to store the energy in to water
- In DZD, we have the know how

More information can be found at www.dzd-fv.cz.

NAD, NADS, NADO, NADOS

STORAGE TANKS

Accumulation tanks for the accumulation of thermal energy from various heat sources.
We manufacture a lot of types of storage tanks for various combinations and types of use.
The basic division is as follows:

- storage tanks without hot water preparation NAD, NADS and UKV
- storage tanks with hot water preparation NADO and NADOS

More information can be found at www.dzd.cz/en/akumulacni-nadrze.

NAD 250 V1

NADO 500 V6

AIR

SPLIT AIR CONDITIONING UNITS

SPLIT AIR is an air conditioner with one indoor unit designed for flats, family houses, offices or smaller facilities.
The air conditioner consists of an outdoor unit, one indoor unit and a smart remote controller.
All three performance variants of the AIR air conditioner offer cooling, heating, a fan and drying functions.

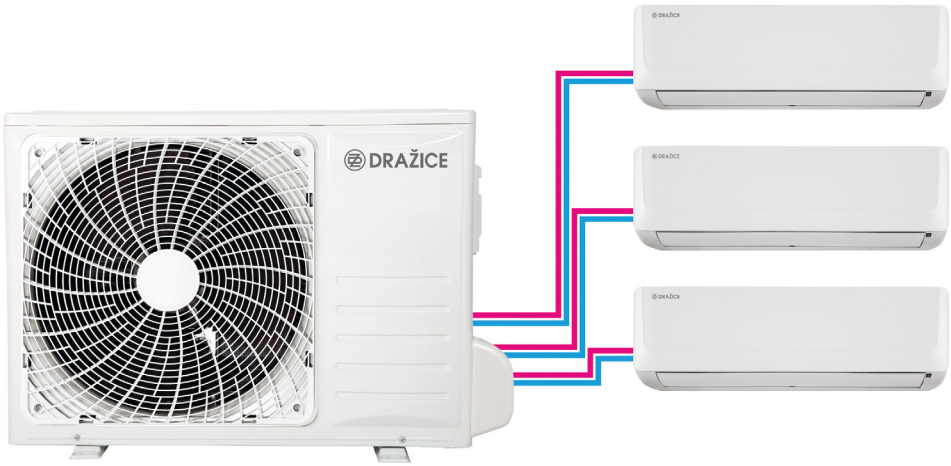

AIR PLUS

MULTISPLIT AIR CONDITIONING UNITS

The Multisplit AIR PLUS air conditioners are designed for systems with a requirement for more indoor units. In this solution, one suitably dimensioned outdoor unit is supplemented by two to four indoor units of identical or different outputs so that the requirements of the project are optimally met.

By combining three types of outdoor units and four types of indoor units, practically any configuration of cooling and heating systems can be achieved exactly according to your needs.
